

FRAME / Modular living.

Designed around your space.
Design visualisation / model and landscape study.

A place to arrive.

A guest cabin. A private studio. A retreat in the landscape.
FRAME brings prefabricated modular thinking to spaces for living and working.

The product begins with a clear footprint and grows through your choice of layout, finishes and site arrangement. The project is shaped around the land, access and intended use.

Developed by Brackets Contracting Co. for projects in Jordan.

Three starting points. Your own direction.

FRAME 27

27 m² / studio cabin

FRAME 54

54 m² / two-module unit

FRAME 48 XL

48 m² / open-plan module

Model visualisations illustrate design possibilities. Final layouts, finishes and site works are established in the project proposal.

FRAME 27 / Compact and complete.

27 m² studio cabin / 3.0 × 9.0 m footprint.
Design visualisation; final configuration is
project-specific.

FRAME 54 / Room to grow.

54 m² two-module housing direction.
Module arrangement and connections follow the
selected layout.

FRAME 48 XL / Open to possibility.

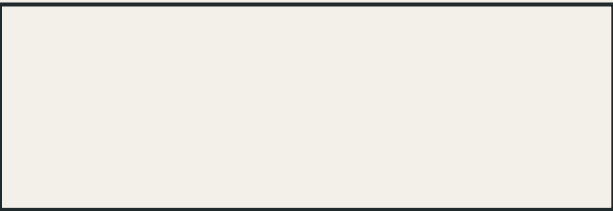

48 m² open-plan module / 4.0 × 12.0 m.
For retreats, studios and compatible commercial uses.

Everyday comfort. Considered details.

Connect the living area to the view. Coordinate cabinetry, floor finishes and openings. Select the bathroom and kitchen arrangement to support the way the unit will be used.

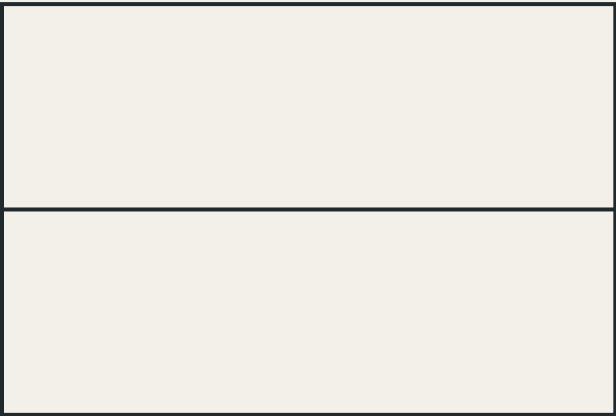

Start with the space.

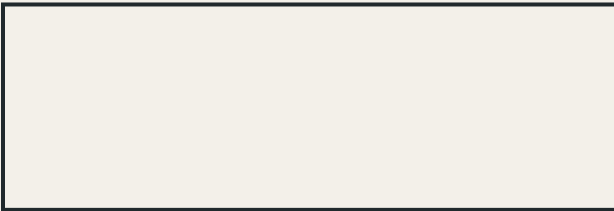

FRAME 27

3.0 × 9.0 m / 27 m²

FRAME 54

Two modules / 54 m²

FRAME 48 XL

4.0 × 12.0 m / 48 m²

Footprint diagrams only. They are not architectural floor plans. The two-module arrangement is illustrative; module connection, internal planning and openings are confirmed during design.

Structure. Skin. Services. Finish.

Lightweight steel

Cold-formed galvanised steel forms the structural starting point. The final framing and connections follow the engineering design.

Interior finishes

Flooring, joinery and wall finishes support the chosen use and aesthetic. Kitchen and bathroom requirements are defined in the agreed scope.

Insulated envelope

Wall and roof build-ups are selected as a coordinated system. Insulation, external finish and internal lining are specified for the project.

Openings + services

Window, door, electrical, plumbing and air-conditioning provisions are coordinated with the layout and site connections.

The right base for the site.

The foundation is selected from the ground conditions, structural requirements, permanence and access strategy.

Steel skids / where a movable installation is appropriate.

Elevated pads or blocks / for a designed support arrangement.

Strip foundations / for suitable permanent installations.

Rooftop visualisation: existing-building capacity, lifting access and approvals require assessment.

Make it your place.

Select a restrained exterior finish, warmer interior surfaces or a more tailored joinery direction. Decorative finishes and specialist surfaces can be coordinated with the wider BRACKETS brand family.

A clear brief.

A buildable proposal.

Use + location

Tell us how the unit will be used, the location and the preferred model. Share plot or building information and the relevant site photographs.

Ground + connections

Confirm foundation design, levels, drainage and connection points. External utility runs and site works are agreed separately in the scope.

Access + placement

Review delivery route, lifting access, setbacks, working space and final position. Site constraints influence the delivery and installation method.

Approvals + timing

Planning permissions, engineering approvals and the production sequence are reviewed before a programme is committed.

Explore. Configure. Confirm. Deliver.

01 / Discover

Choose a starting model and describe the intended use. Discuss the location and the character you want the space to have.

02 / Configure

Review layout, finishes, services and site requirements. Develop the proposal around the selected unit and scope.

03 / Confirm

Agree the drawings, specification, inclusions, exclusions, quotation and programme before proceeding.

04 / Coordinate

Production, transport, foundations and installation follow the confirmed project arrangements.

Pricing is quotation on request. Delivery periods are confirmed against the agreed specification and site conditions.
